

## How to format your USB thumb drive:

### Important!

**Back up your data from the USB thumb drive prior to formatting as all data will be deleted during the formatting process.**

1. Insert the USB thumb drive into the PC.
2. Open Windows Explorer and select the USB Thumb drive.
3. Right-click onto the USB thumb drive and select the option **Format...**
4. A new window opens. Select the following options:
  - File system:  
**NTFS**
  - Allocation unit size:  
**Default allocation size**
  - Format options:  
**Quick Format**

5. Furthermore, under **Properties** for your USB thumb drive, you can deselect the option **Index disk for quick search**, as long as your USB disk possesses this property.

After formatting the USB thumb drive, you should see a major improvement in the exporting process' speed. Please note that you need to **safely remove** the USB thumb drive prior to disconnecting it from the PC at all times.
